DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 1-9 in Paper No. 7 is acknowledged.

Claim 33 is withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by CROWLEY (U. S. Patent No. 5,544,660). Crowley discloses a catheter assembly having a hollow sheath 12, an elongate operative element 18 with a relatively stiff initial section for transferring torque to an image element at its end, a rotatable combined connector 7 at the proximal end of the operative element that is a data and mechanical connector wherein the connector has a angled rotary alignment surface (see inside surface of skirt 1 in Fig. 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over CROWLEY as applied to claim 1 above, and further in view of CROWLEY (U. S. Patent No. 5,524,630). Crowley ('660) discloses the claimed invention except for a metal tube at the initial section of the operative element and a fluid seal. Crowley teaches a metal tube 11 at the initial section of the operative element and a fluid seal in order to join the operative element to the connector and to prevent fluid leakage between the operative element and the catheter sheath. It would have been obvious to one of ordinary skill in the art at the time of the invention to use the teachings of Crowley ('630) in the device of Crowley ('660) in order to allow the operative element to be slid into the sheath and to prevent flow of inflation fluids (3:22-33).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Hayes at (703) 305-5873. The examiner can usually be reached Monday -Thursday, 7:00-4:30, and on alternate Fridays. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler, can be contacted at (703) 308-3552.
